

DeLaval Cleaning Solutions

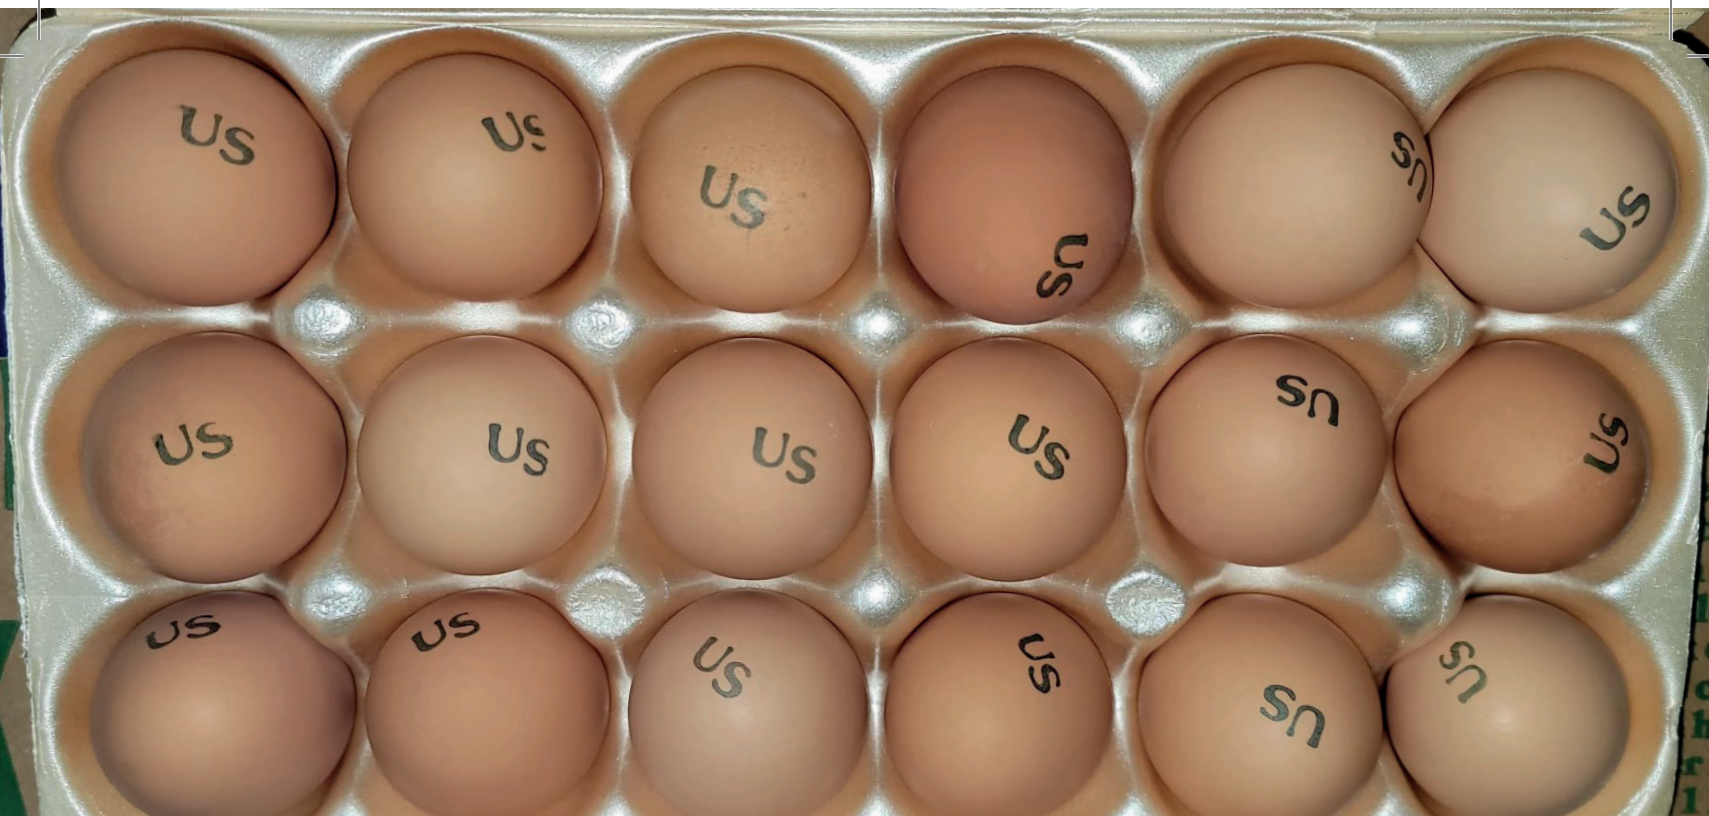

Powder Drying for Perfect Stamping

Specialty Egg Wash Solutions

While quality cleaning solutions and lower dirty returns are paramount to egg washing activities, the impact of drying time on eggs cannot be overstated! Faster drying times mean clearer stamps and better looking eggs, preventing rework and disruptions during production. Protect your egg processing facility against high dirty return numbers and smudged stamping with the right products and program from DeLaval Cleaning Solutions!

Egg Washing 101

For reducing your dirty returns and providing an egg that is dry and prepared for a crisp, clean stamp. Safeguarding your work and the quality of your product with cleaning solutions that do the following:

- Organic soil removal
- Work within a wide range of water hardness
- Allow for quick drying of eggs
- Reduced cost

DeLaval Cleaning Solutions makes cleaning efficiency as easy as possible with specialty-formulated products and sanitation programs designed for egg processing installations. Our products help your plant generate a healthy cycle of cleaning.

UltraGlimt™

OMRI approved for use in organic facilities!

This product is approved for direct product contact and helps maintain cleanliness of eggs in comparison to other egg wash products. The high alkalinity of this product allows for fast soil digestion and reduces the need for high frequency dosing in order to reach target pH.

RenaDry™

Fast drying for better stamping!

This patent pending product is deemed GRAS per the FDA and is formulated only with direct food contact approved materials. RenaDry™ promotes drying in eggs immediately after wash and helps lead to extremely low dirty return numbers – up to 25% less! This low foaming product inhibits corrosion and is also formulated with ingredients to help with egg preservation during storage.
